In Flood-Based Livelihood Systems, households depend on flood- or rainwater for the production of crops and as basis for their livelihood. Good practices from various systems around the world have been documented and are shared as opportunities to improve the livelihoods, to broaden the basis from which income is generated and to increase their resilience.

**Improved Livelihood Opportunities in Flood-Based Livelihoods Systems**

1. Additional water management and water use practices
2. New cropping varieties / crop / cropping practices
3. Value chain practices
4. Processing or grading & livestock and poultry practices
5. Livelihood practices

- New Crops
- Improved tools
- Fodder grasses
- Controlling rodents
- Improved local grain storage
- Honey production
- Agroforestry
